

INTERPRETING MOTION GRAPHS - 1

This test is designed to measure your ability to interpret the shapes of motion graphs. In each question select the correct answer and write its letter (A, B, C or D) on your answer sheet.

The questions refer to the graphs below. Each graph represents a portion of the motion of an object moving in a straight line.

Set 1 Displacement/Time Graphs In this set, the y axis represents displacement. For each question, choose the graph which best fits the description given.

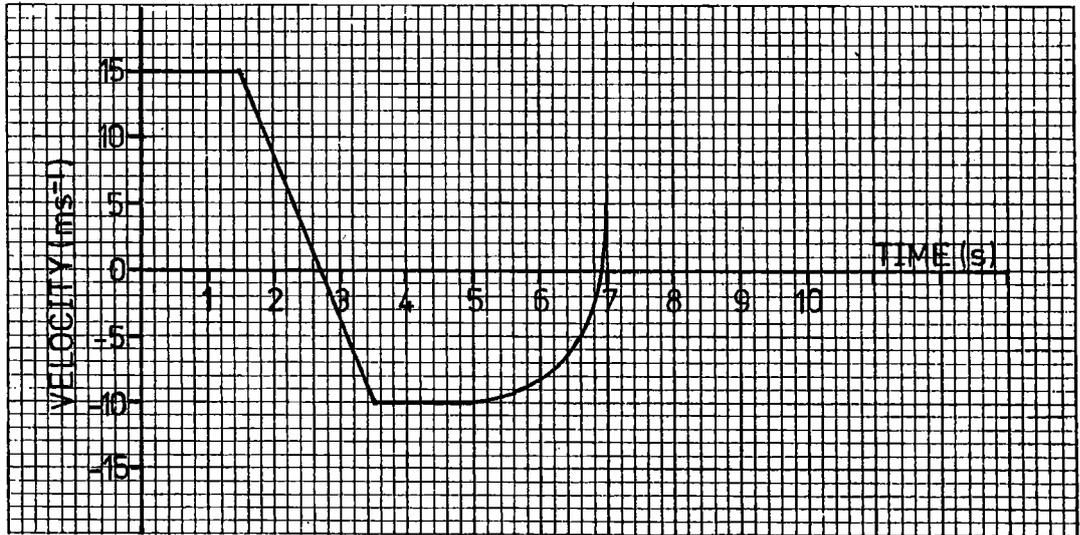

Question	Description An object moving with:	Graph			
		A	B	C	D
1	zero velocity (i.e. stationary)	E	F	G	H
2	constant (uniform) velocity	E	G	J	K
3	non-uniform velocity	F	G	H	I
4	increasing velocity	H	I	J	K
5	decreasing velocity	F	H	J	K

Set 2 Velocity/Time Graphs In this set, the y axis represents velocity. For each question, choose the graph which best fits the description given.

Question	Description An object moving with:	Graph			
		A	B	C	D
6	constant velocity	F	G	H	I
7	increasing velocity	F	H	I	L
8	constant acceleration	E	G	J	K
9	increasing acceleration	E	F	H	J
10	decreasing acceleration	F	I	J	K

INTERPRETING MOTION GRAPHS - 2

This test is designed to measure your ability to interpret a motion graph. The questions refer to the graph below:

The graph shows the velocity of an object over a period of time.

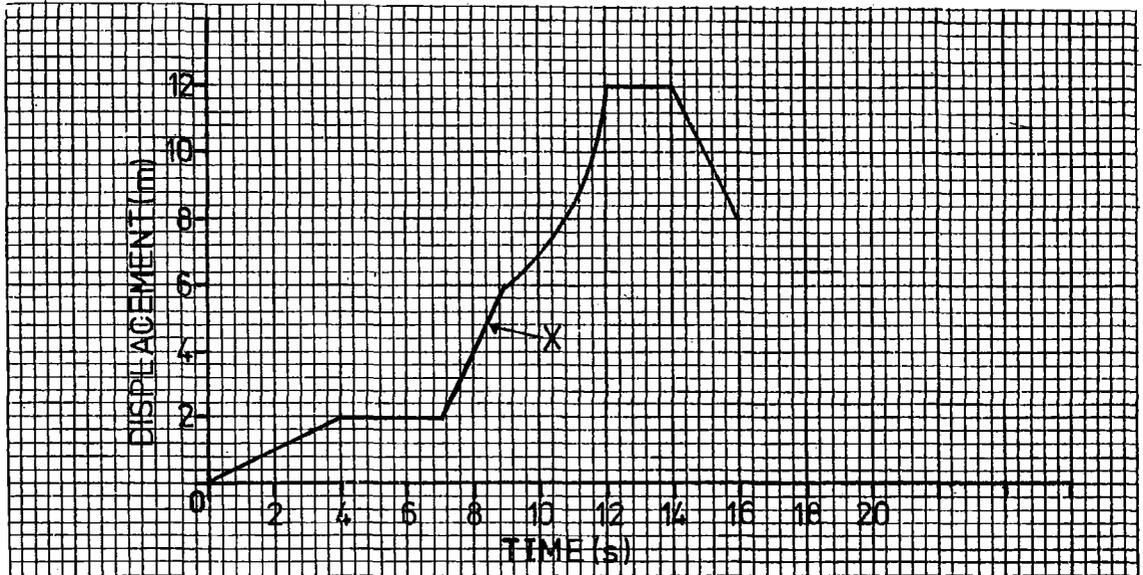

- a) When (if ever) is the object stationary? _____
- b) What is the maximum velocity of the object? _____
- c) What is the minimum velocity of the object? _____
- d) What is the displacement of the object at 2.7 seconds? _____
- e) What is its displacement at 6.9 seconds? _____
- f) What is its maximum displacement? _____
- g) What is the velocity of the object at $t = 4$? _____
- h) What does the area under the graph represent? _____
- i) What does the slope of the graph represent? _____
- j) What was the average velocity of the object? _____
- k) What was the instantaneous acceleration of the object at time $t = 2$? _____
- l) When is the acceleration zero? _____
- m) When is the acceleration negative? _____
- n) What the magnitude of this acceleration? _____
- o) When is the acceleration positive? _____
- p) What is its average value for this period? _____
- q) What total distance did the object travel? _____

Continue the graph using the following information:

- r) the object continues on its journey with zero acceleration for 2 seconds
- s) it then accelerates at 5ms^{-2} for 2 seconds
- t) After 2 seconds of uniform acceleration the object is stationary.

INTERPRETING MOTION GRAPHS - 3

This test is designed to measure your ability to interpret motion graphs. The questions refer to the two graphs below:

The graph shows the displacement of an object over a period of time.

- a) How long did it take the object to travel 6 metres? _____
- b) How long did it take the object to travel the last 6 metres of its journey? _____
- c) What total distance was travelled by the object? _____
- d) What is its displacement after 16 seconds? _____
- e) How far is it displaced between $t = 6$ and $t = 16$? _____
- f) What is the instantaneous velocity of the object at position x ? _____
- g) When is the object stationary? _____
- h) What is the highest constant velocity of the object? _____
- i) What is the acceleration of the object at x ? _____
- j) What is the average velocity of the object? _____
- k) What is represented by the area under the graph? _____
- l) When was the velocity negative? _____
- m) What is the magnitude of the negative velocity? _____
- n) How far did the object travel between $t = 12$ and $t = 14$? _____
- o) What does the slope of the graph represent? _____
- p) What does a slope of zero represent? _____
- q) Where is the slope zero? _____

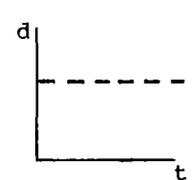

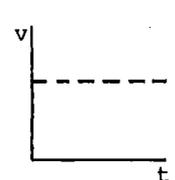

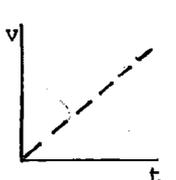

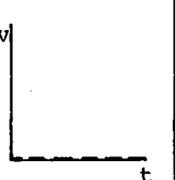

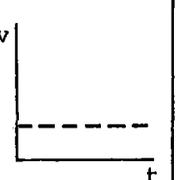

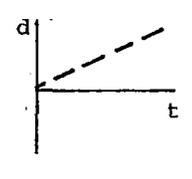

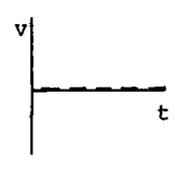

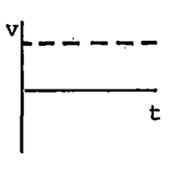

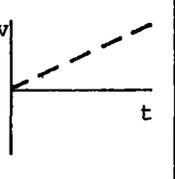

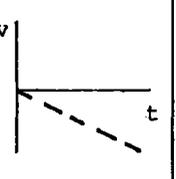

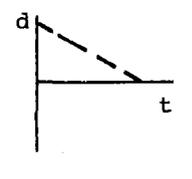

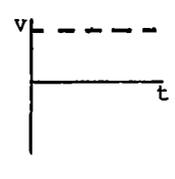

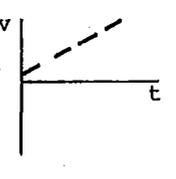

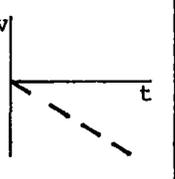

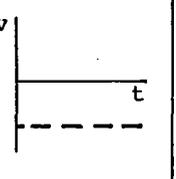

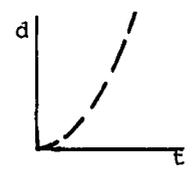

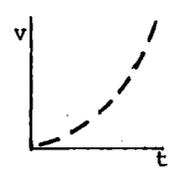

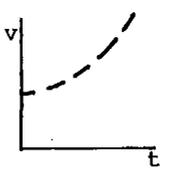

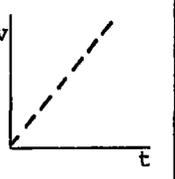

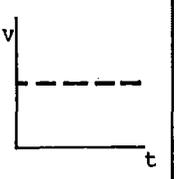

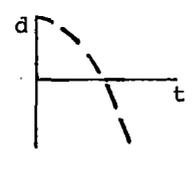

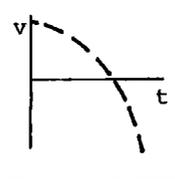

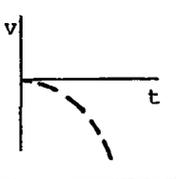

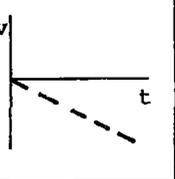

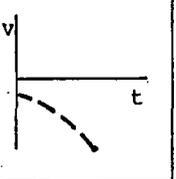

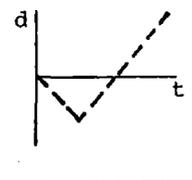

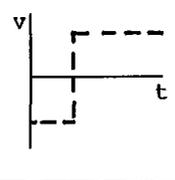

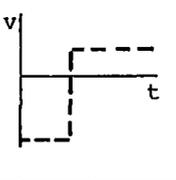

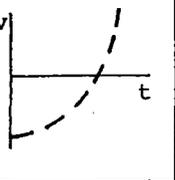

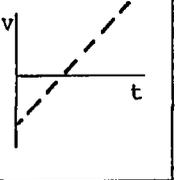

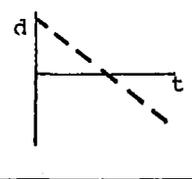

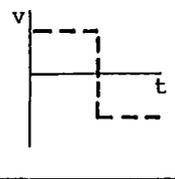

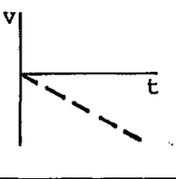

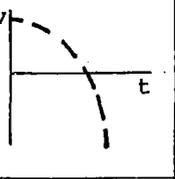

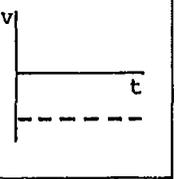

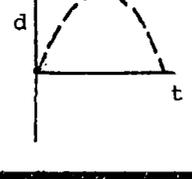

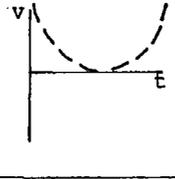

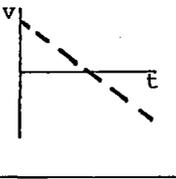

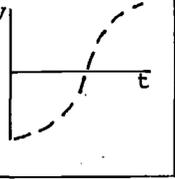

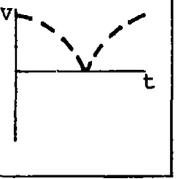

Continue drawing the graph using this information:

- r) for the next 3 seconds the object was stationary.
- s) it then headed towards home at 2 metres per second
- t) after 3 seconds, it slowed down to 1 metre per second until it reached home

INTERPRETING MOTION GRAPHS - 7

This test is designed to measure your ability to change a displacement/time graph to a velocity/time graph. For each question select the correct answer and write its letter (A, B, C or D) on your answer sheet.

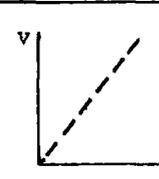

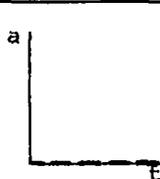

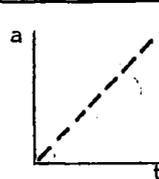

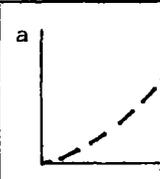

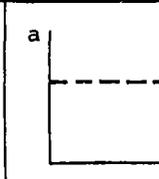

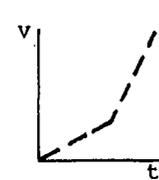

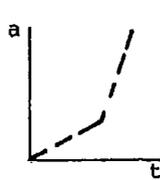

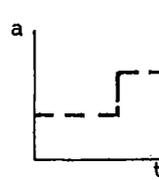

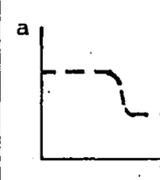

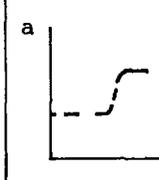

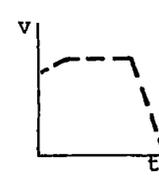

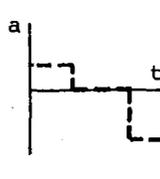

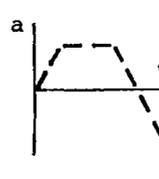

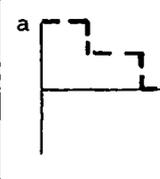

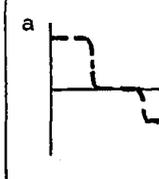

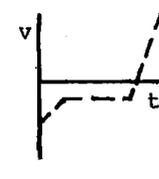

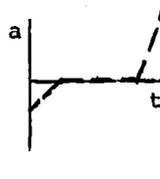

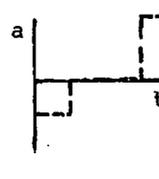

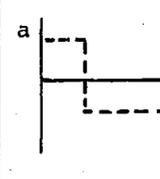

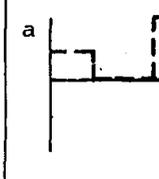

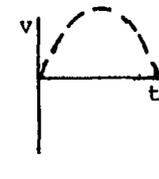

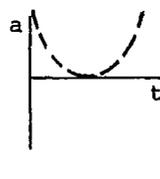

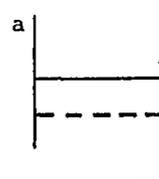

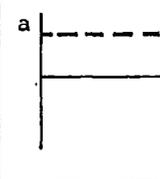

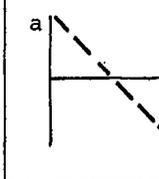

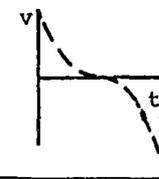

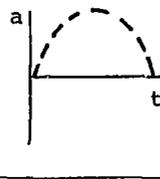

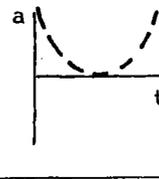

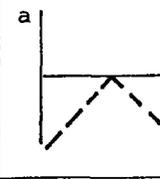

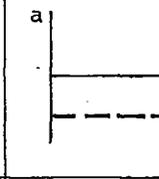

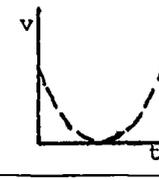

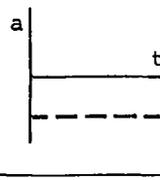

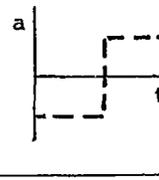

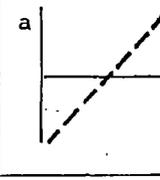

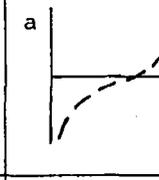

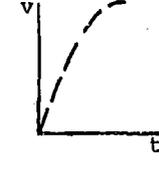

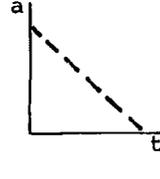

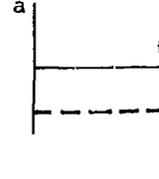

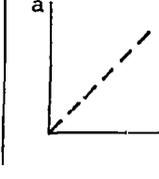

For each displacement/time graph choose the graph which best represents this motion on a velocity/time graph.

Q	Displacement/ Time Graph	Equivalent Velocity/Time Graph			
		A	B	C	D
1					
2					
3					
4					
5					
6					
7					
8					

INTERPRETING MOTION GRAPHS - 8

This test is designed to measure your ability to change a velocity/time graph. For each question select the correct answer and write its letter (A, B, C or D) on your answer sheet.

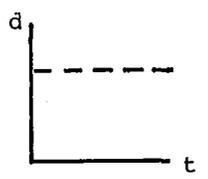

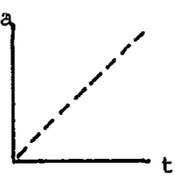

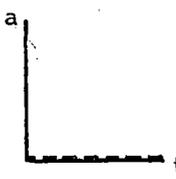

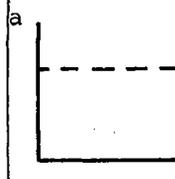

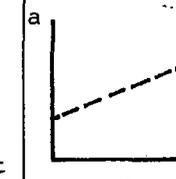

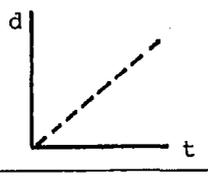

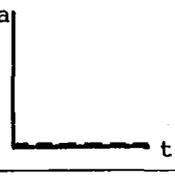

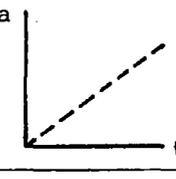

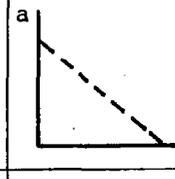

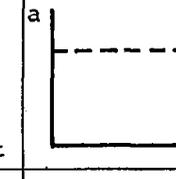

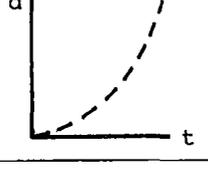

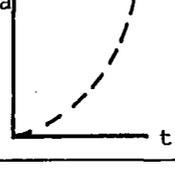

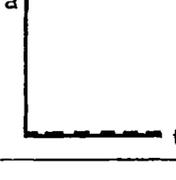

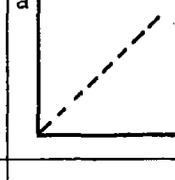

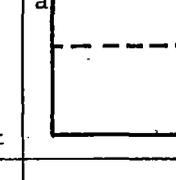

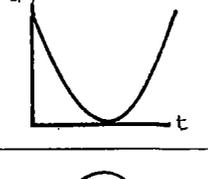

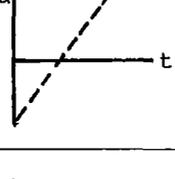

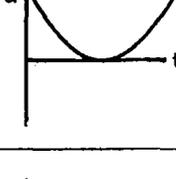

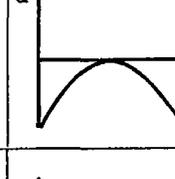

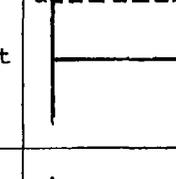

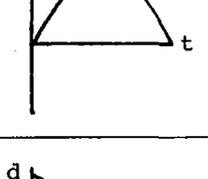

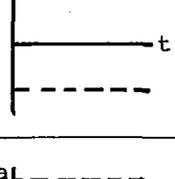

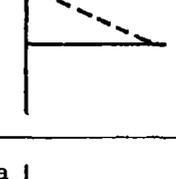

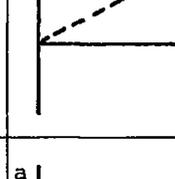

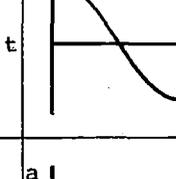

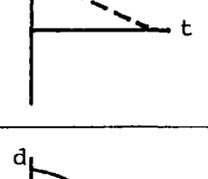

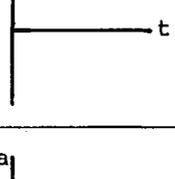

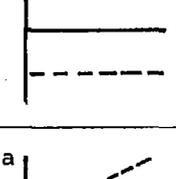

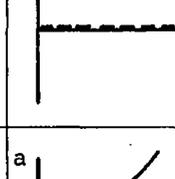

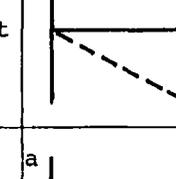

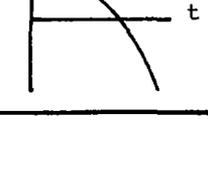

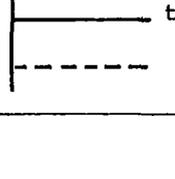

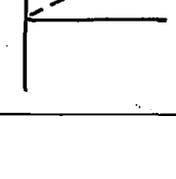

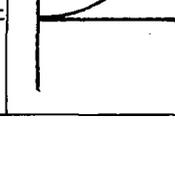

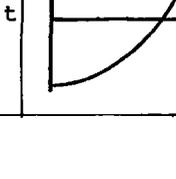

For each velocity/time graph, choose the graph which best represents this motion on an acceleration/time graph.

Q	Velocity/ Time Graph	Equivalent Acceleration/Time Graph			
		A	B	C	D
1					
2					
3					
4					
5					
6					
7					
8					

INTERPRETING MOTION GRAPHS - 9

This test is designed to measure your ability to change a displacement/time graph to an acceleration/time graph. For each question select the correct answer and write its letter (A, B, C or D) on your answer sheet.

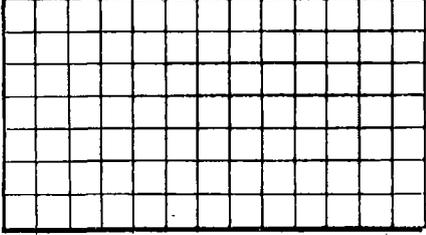

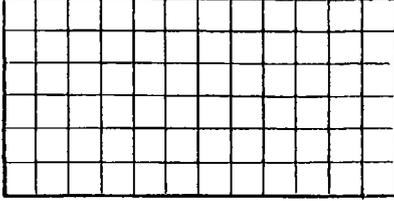

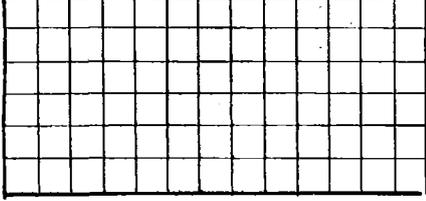

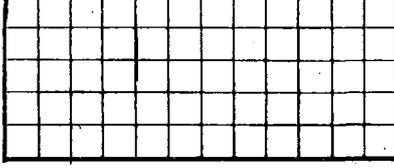

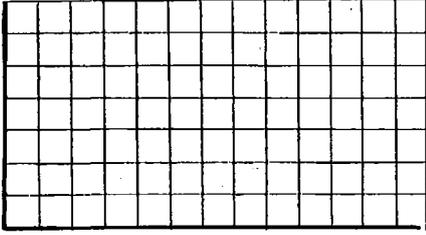

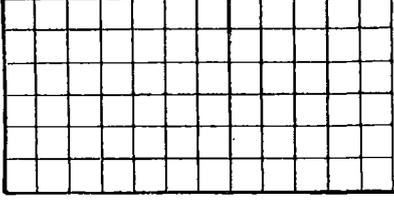

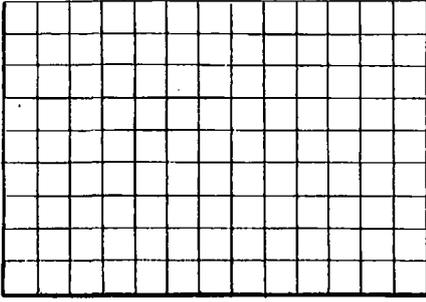

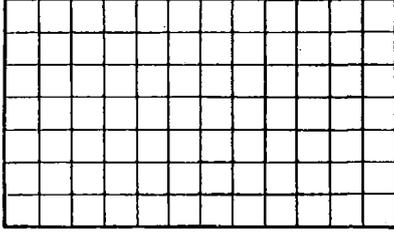

For each displacement/time graph shown, choose the graph which best represents this motion on an acceleration/time graph.

		Equivalent Acceleration-Time Graph			
Q	Displacement Time Graph	A	B	C	D
1					
2					
3					
4					
5					
6					
7					

DRAWING MOTION GRAPHS

This test is designed to measure your ability to draw graphs of the motion of various objects.

In each space provided, draw a graph which represents the motion of the object as described in each space.

<p>1. Object travels uniformly for 4 seconds at 5 ms^{-1}.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>	<p>2. Object starts from rest and accelerates at 2 ms^{-2} for 3 seconds.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>
<p>3. Object starts from rest and accelerates at 4 ms^{-2} for 2 seconds then travels uniformly for 3 seconds.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>	<p>4. Object starts at 6 ms^{-1} and slows down to 3 ms^{-1} in 4 seconds. It stops after another 2 seconds of uniform deceleration.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>
<p>5. Object moves with uniform velocity and travels 10 metres.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>	<p>6. Object moves at 2 ms^{-1} for 3 seconds, then accelerates for 3 seconds. It travels 14 metres in all.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>
<p>7. Object starts at 2 ms^{-1} and accelerates uniformly until it has travelled 18¹² metres.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>	<p>8. Object starts from rest and accelerates uniformly for 2 seconds. It then travels with constant velocity for 2 seconds. It travels a total of 10 metres.</p> <div style="display: flex; align-items: center;"> <div style="margin-right: 10px; text-align: right;">$v (\text{ms}^{-1})$</div>  </div> <div style="text-align: right; margin-top: 10px;">$t (\text{s})$</div>
